

PREVIEWER

Test Your Messages to Ensure Consistency and Deliverability

Previewer lets you render desktop and mobile previews of your messages in more than 30 platforms to ensure consistent design and strong deliverability. Customers can preview messages in the inbox at the device and browser levels. Previewer lets you make changes on the fly, saving yourself the time of switching between tools and cutting the cost of third-party solutions.

Key Benefits

- **Catch potentially costly errors** by rendering your messages in more than 30 email clients, web browsers, popular phones and tablets.
- **Save time by testing within one platform** instead of dealing with separate tool logins and vendors.
- **Improve deliverability and increase revenue** by checking your emails against leading spam protection software to ensure your messages reach the inbox.
- **Ensure your links and images work** by validating every link and image URL in your emails.

Test your messages to ensure they render consistently and reach the inbox.

Message Preview

Render your messages in more than 30 email clients and a variety of web browsers. Preview your changes on the fly by viewing:

- Desktop: View what your message looks like in different desktop email clients, including plain text and color blindness previews.
- Web: View what your message looks like in commonly used web browsers.
- Mobile: View what your message looks like on all of the most popular mobile devices.

Spam Audit

Check your emails against leading spam protection software to ensure your messages will reach the inbox.

Link Validation

Confirm the URLs you're linking to are not blacklisted and that links are formatted correctly.

Image Audit

Verify your images are displaying correctly and check how long the message takes to render, guaranteeing that the images in your message are properly formatted.
